OUR PROMISE

Our platform enables fair, accurate hiring through a transparent, bias-aware decision process. AI-powered insights evaluate candidates based on qualifications alone and clearly explain recommendations, while final decisions always remain with human hiring managers. Privacy, consent, and data security are built into every step, ensuring people data is protected and used responsibly.

TABLE OF CONTENTS

PRIVACY SAFEGUARDS

Communication and Consent with
Data Users and Providers

05

DATA SECURITY

Safeguards Taken Throughout our
Software to Protect Data

06

DECISION LOG

Clear and Defined Structure of Ethical
Decisions

3 - STEP DECISION MAKING PROCESS: FILLING ROLES

ONE

AI AGENT

Our AI agent recommends the most qualified candidates from both internal employees and external applicants using an advanced machine-learning model.

- data-driven, evaluating candidates solely on their qualifications
- does not consider gender, race, or other demographic factors, and excludes subjective or external opinions.

TWO

MODEL EXPLANATION

Our AI-driven explanation provides clear insight into the reasoning behind each recommendation.

- reduces blind suggestion bias
- ensures transparency in the decision-making process.

THREE

FINAL DECISION

The final hiring decision is made by a qualified manager, ensuring that AI recommendations support rather than replace human judgment.

- prevents bias from fully automated decisions by allowing the use of quantitative reasoning - such as internal hire preference

PRIVACY SAFEGUARDS

CONSENT —→ FROM
APPLICANTS

EMPLOYEES

Privacy policy/data
sharing agreement on
our HR software for
current employees
and applicants

We incorporate Fair
Information Practice
Principles (FIPPs):
transparency, security
safeguards, and
accountability

DATA SECURITY

ACCESS CONTROL

User access is protected through secure logins. Role-based permissions ensure HR managers have full access including editing and deleting candidates and employees, while HR employees are limited to viewing and suggesting actions only.

DATA PROTECTION

All data is transmitted securely using HTTPS. Controls are in place to maintain data integrity and prevent unauthorized changes. Secure data only transferred and shared with those with authority.

SYSTEM SECURITY

Application routes and API endpoints are secured to restrict access to authorized users only. These measures ensure company data remains protected within the system.

DECISION LOG

Log Entry 1: 2026-01-18		Decision ID: DL-007 Internal Employee	
Decision Type		Role Recommendation	
Input Data Used		- Technical skills: SQL, Python, Data Visualization - Experience: 2 years analytics support - Job Category: Professional - Excluded data: gender, race, age, personal identifiers	
AI Logic Applied		- LLM-based skill-to-role similarity scoring - Quantitative weighting favoring internal candidates when skill match $\geq 80\%$	
Recommendation Output		Suggested Role: Data Analyst I	
Explanation Provided		This role was recommended because the employee meets 4 out of 5 required skills. The remaining skill gap can be addressed through a targeted statistics upskilling plan.	
Biased Check Result		Passed: Recommendation based solely on qualifications and experience. LLM does not consider any biased information	
Privacy Safeguard Applied		- Available privacy policy explaining shared data - Data accessed only by authorized HR personnel	
Final Decision Review		Reviewed and approved by Hiring Manager
